issues relating to values have always had a place in the school science curriculum sometimes this has been only in terms of the inclusion of topics such as the nature of science and or scientific method and or particular intentions for laboratory work that relate to scientific method sometimes it has been much broader for example in curricula with sts emphases of importance to aspects of this proposal is that different countries cultures have had different traditions in terms of the place of values in the school science curriculum one obvious very broad difference of this form is the central place in science education thinking in many european countries of bildung and the complete absence of this construct from most science curriculum thinking in english speaking contexts there are numbers of such country cultural differences in the 1990s many countries moved towards various conceptualizations of outcomes based education oboe sometimes so labelled and sometimes not it was usual but not universal for oboe focused science curricula to have constrained views of the values that should be implicit and explicit in curriculum that is views concerned only with the nature of science and scientific method both usually seen as quite unproblematic currently there are a number of education systems that are changing again and choosing to move away from outcomes based education for example south africa and several australian states one of the most interesting features of many of these movements is the re embracing of a wider view of the science curriculum including a reconsideration of the nature and place of the values associated with science in the purposes for and approaches to science education

this is perhaps the most widely read of michael novak s books belief and unbelief attempts to push intelligence and articulation as far as possible into the stuff of what so many philosophers set aside as subjectivity it is an impassioned critique of the idea of an unbridgeable gap between the emotive and the cognitive and in its own way represents a major thrust at positivist analysis written in a context of personal tragedy as well as intellectual search the book is grounded in the belief that human experience is enclosed within a person to person relationship with the source of all things sometimes in darkness other times in aridity but always in deep encounter with community and courage it is written with a deep fidelity to classical catholic thought as well as a sense of the writings of sociology anthropology and political theory from harold lasswell to friedrich von hayek this third edition includes novak s brilliant 1961 article god in the colleges from harper s a critique of the technification of university life that rules issues of love death and personal destiny out of bounds and hence leaves aside the mysteries of contingency and risk in favor of the certainties of research production and consumption for such a lost generation belief and unbelief will remain of tremendous interest and impact when the book first appeared thirty years ago it was praised by naturalists and religious thinkers alike sidney hook called it a remarkable book written with verve and distinction james collins termed it a lively and valuable essay from which a reflective religiously concerned reader can draw immense profit and the washington post reviewer claimed that novak has written a rich relentlessly honest introduction to the problem of belief it is a deeply personal book rigorous in argument and open ended in conclusions
